

DIGITAL THUMBS UP

We are proud to have worked in collaboration with John Marley Senior Works Superintendent at Skanska Costain STRABAG Joint Venture for HS2, Safety Shield to introduce a new innovative technology solution, the first of it's kind in the UK.

Pioneered by **Rob Lynch**, the traditional **Thumbs Up** is widely used on sites across the UK. Collaboratively, we took this a step further and digitalised the procedure, taking site safety to a new level. The digital thumbs up ensures that a machine is safe to pass or approach by providing the approaching person with clear visual and audible instructions, and acceptance from the Operator. The simple model involves the Operator pressing a button in the cab that triggers the sign illumination to change from a red 'No Entry' to a green 'Thumbs Up'. This is accompanied by an audible message from an inbuilt speaker saying, "**Thumbs Up accepted, approach with caution**". At the same time, the machine is disabled and made safe for the approaching person.
