

OUR ALL NEW CUSTOMER APP

Customer App:

Embracing mobility, we have launched a dedicated customer app enabling effortless task management on a smartphone. Featuring modern and effective interfaces and search functions, our brand-new app empowers users by integrating all essential data in one accessible location.

We've listened to our customers and have developed this app with them in mind. Users can easily search for invoices and access comprehensive hire information with interactive maps for better insights. Telematics integration provides the capability for live tracking, offering in-depth insights through the machine's API feed. This information covers idle time, fuel consumption, and CO2 emissions. Having instant access to this data creates the chance to collaborate with operators in enhancing on-site productivity. This involves reducing idle time, fuel expenses, and carbon emissions. The convenience of requesting new hires, reporting breakdowns, and initiating off-hires is now a frictionless reality. Complete service and breakdown detail, including PDI (Pre-Delivery Inspections), fault codes, are available at the touch of a button.

Are you using our new customer app?

As we transition from the outdated system to our purpose-built portal, we want to ensure all our customers are supported.
